FINE ENGLISH PEWTER

FINE ENGLISH PEWTER

Our Pewter range includes a collection of unique designs produced in England from an alloy called Fine English Pewter. This alloy is of historical origin, and once molten, is handcrafted by expert artisans to create products with a unique and authentic appearance.

Subtle differences in each piece are the result of a manufacturing process being performed predominantly by hand, using centuries old techniques combined with modern machining technology.

Fine English Pewter is a living finish, and will oxidize gracefully with its environment. While many owners are happy to leave their knobs in the oxidized state, others prefer to restore to original luster by cleaning with a soft damp cloth, lightly dabbed with metal polish suitable for silverware.

The manufacturing process used to produce the knobs results in a relatively consistent finish. However, there may be small differences in distressing and detailing from one piece to another.
